

## **Download full report and data**

This report contains ABARES forecasts for the value, volume and price of Australia's agricultural production and exports to 2025–26.

# \$91b

Value of  
production in  
2025–26

## Agricultural overview

Value forecast to fall by 3%  
to \$91 billion in 2025–26.

- Gross value of agricultural production to fall by 3% to \$90.7 billion in 2025–26.
- Livestock and livestock product values to fall as lower turn-off outweighs robust global demand.
- Crop production values to fall as lower production outweighs slight price rises.
- Agricultural export values to fall by 3% in 2025–26 to \$71.7 billion given falling crop export values.
- Average farm business profit to fall in 2025–26 to \$141,000 driven by lower farm production.

# 2.7%

Global economic  
growth in 2025

## Economic overview

Global economic outlook to  
remain subdued in 2025.

- Uncertainty around inflation and trade policy weigh on global economic outlook for 2025–26.
- Despite macroeconomic uncertainty, demand for Australian agricultural exports to remain resilient.
- The Australian dollar is expected to remain low in 2025–26, supporting export competitiveness.
- Input prices expected to remain elevated in 2025–26.
- Australian consumer spending to increase in 2025–26 with rising real disposable incomes.

## Seasonal conditions

Favourable climate outlook across much  
of the country to support Australian  
2025–26 crop and livestock production.

- Global crop production in 2024–25 is projected to remain above 2023–24 levels.

- Close to average rainfall forecasts for June to August 2025 is expected to boost production for many of the world's major grain- and oilseed-producing regions in 2025–26.
- Average to above average summer and autumn rainfall across northern New South Wales, Queensland and southern Western Australia has provided a strong start to the 2025–26 winter cropping season for those areas.
- In contrast, low soil moisture and limited autumn rainfall in cropping regions in South Australia, western Victoria, southern New South Wales and northern Western Australia has seen a large proportion of the 2025–26 winter crop sown dry and will be heavily dependent on forecast winter rainfall.

**\$51b**

Value of  
production in  
2025–26

## Outlook for crops

Falling value of crop production driven by lower production.

- Value of Australian crop production to decrease by 4% to \$50.7 billion in 2025–26 as production falls.
- Australian crop production to decline in 2025–26 under an expectation of drier conditions.
- Value and volume of crop exports to decline but remain above the 10-year average.
- World crop prices to rise in 2025–26, reflecting tight global supply amidst growing demand.

**\$40b**

Value of  
production in  
2025–26

## Outlook for livestock & livestock products

Falling value of production driven by lower production volume.

- Value of livestock and livestock product production to fall by 1% to \$40 billion in 2025–26.
- Domestic prices to rise for beef cattle, sheep, and milk in 2025–26.
- Domestic production for all major meat and livestock products to fall except for pig meat, poultry, and eggs.
- Value of livestock and livestock product exports to ease from record highs in 2024–25.
- Strong world demand for meat to support higher export prices.

**\$141k**  
Broadacre farm  
business profit  
in 2025–26

## Broadacre farm performance forecast

Production and profits ease  
but remain strong

- National average broadacre farm business profit to decrease by \$28,000 in 2025–26, from \$169,000 to \$141,000.
- Cropping farm profits supported by rising prices, while production to ease but remain high in 2025–26.
- Average livestock profits to remain steady, supported by increased values of ‘stocks on hand’.
- Favourable conditions to support strong agricultural outcomes for Queensland, northern New South Wales and much of Western Australia.
- Southern New South Wales, South Australia and western parts of Victoria face improving conditions but significant downside risk.
