- Seasonal conditions dominate production decisions while input costs remain a source of uncertainty.
- Gross value of agricultural production to fall by 5% to \$98.3 billion in 2026–27.
- Agricultural export value to fall by 9% to \$74.8 billion driven by lower livestock product and crop exports.
- While the Middle East conflict weighs on global economic growth, food demand remains resilient.
- Average broadacre farm business profit to fall by 70% driven by lower revenue and higher input prices.

- Total global grains and oilseeds production is expected to reach a new record high in 2025–26.
- Variable summer/autumn rainfall has limited crop and pasture prospects across parts of eastern Australia.
- National summer crop production in 2025–26 is expected to be lower than forecast in March.
- Much of southern Australia is expected to have below average climatic condition during winter 2026.

- Total value of Australian crop production to fall by 8% in 2026–27 to \$50.9 billion.
- Value of crop exports to fall by 10% to \$37.0 billion as lower volumes are expected to offset higher prices.
- Domestic grain prices to rise in 2026–27, with drier seasonal conditions and lower production volumes.
- Drier seasonal outlook impacting grower decisions to a greater extent than rising fuel and fertiliser costs.

- Gross value of livestock and livestock product production to fall by 2% to \$47 billion in 2026–27.
- Domestic prices to fall for cattle and lambs but rise for milk and wool in 2026–27.
- Beef, sheep, pig and poultry meat production volumes to remain elevated in 2026–27 but dairy to decline.
- Value of livestock and livestock product exports to fall by 7% in 2026–27 to \$38 billion.
- Slower global growth and higher inflation present headwinds to world demand for livestock products.
