

2025

This report is a first step towards understanding productivity in the plantation forestry sector and uses a partial productivity measure of Mean Annual Increment (MAI) which is the average annual volume growth per hectare of a plantation over its entire age.

Published: 5 December 2025

The wood volumes analysis was announced as a 2022 election commitment during a period of uncertainty in the forest and wood products sector.

Published: 27 March 2025

2021

This report presents an outlook on the availability of and demand for raw wood fibres by geographic region and country.

2020

Forest and Wood Products Australia commissioned ABARES to develop a quantitative framework for projecting future exports and imports of selected wood

Published: 4 August 2020

This study, commissioned by Forest and Wood Products Australia, is the first comprehensive productivity and efficiency analysis of the Australian sawmilling industry at the mill level.

Published: 10 July 2020

Major challenges for forestry and wood processors loom in the wake of summer's bushfires and COVID-19, according to analysis in our latest ABARES Insights report.

Published: 30 June 2020

2019

This report was jointly commissioned by Forest and Wood Products Australia and the Australian Bureau of Agricultural Resource Economics and Sciences (ABARES) to estimate the area of new softwood plantations required to support a world-scale softwood sawmill in selected National Plantation Inventory (NPI) regions.

Published: 26 February 2019

This report explores the economic potential of establishing new commercial timber plantations in Australia, between 2020 and 2050, under current and alternative market conditions. The findings of the report are intended to assist industry and policymakers anticipate and adapt to expected changes in the industry.

Published: 26 February 2019

2018

This report presents estimates of the potential production and use of harvest and sawmill residues in Australia in 2050. It provides insights into what the production and use of wood residues may look like in decades to come, once any required investment in infrastructure has taken place.

Published: 6 November 2018

This technical report estimates the responsiveness of demand for structural pine to changes in timber and steel prices. Measures of demand responsiveness can provide valuable insights into the potential implications of changes in policy or market settings on volumes and prices received by producers. The analysis focuses on estimating short-term price elasticities of demand--a formal measure of the sensitivity of demand--to changes in prices in the same quarter or recent past.

2016

As part of a three year (2015-16 to 2017-18) joint project between Forest and Wood Products Australia (FWPA) and ABARES, ABARES developed quarterly sales volume forecasts for selected wood products from the FWPA Softwood Data series. This technical report documents the methods and assumption underlying ABARES forecasts.

2015

This report builds on previous work ABARES undertook on the Illegal Logging Prohibition Regulation 2012. It investigates differences in the characteristics of importers of regulated timber products for four different business size categories. ABARES also conducted sensitivity testing to examine the potential impact of changes to the Regulation's key eligibility criteria.
