

Overview

Australian plantation statistics is published every year. It supports strategic forest industry planning and decision-making by presenting information on total plantation area, new planting and ownership.

The plantation areas are presented by jurisdiction and National Plantation Inventory regions for softwood and hardwood plantation types, and species, based on data collected from private growers and grower representatives and public state and territory agencies.

In this report, 2024–25 data are compared with data from the 2004–05, 2009–10, 2014–15 and 2019–20 spatial plantation reports (5 yearly) and 2023–24 annual plantation update.
