

AQUAVETPLAN is the Australian Aquatic Veterinary Emergency Plan. It is a series of manuals that outline Australia's approach to national disease preparedness and proposes the technical response and control strategies to be activated in a national aquatic animal disease emergency.

The department manages the development and maintenance of AQUAVETPLAN manuals. The manuals are authored by Australian aquatic animal health experts with extensive stakeholder consultation. Each manual undergoes a formal endorsement process through government and relevant industry sectors. Manuals are prepared during 'peace time' so that the information is readily available in the event of an actual emergency.

AQUAVETPLAN manuals are working documents that are updated as required to ensure they take into account new research, experience, and emerging disease threats.

AQUAVETPLAN Manuals

Disease Strategy Manuals

Finfish Diseases:

Crustacean Diseases:

Mollusc Diseases

- [Abalone Viral Ganglioneuritis](#)
- [Withering Syndrome of Abalone](#) (infection with *Xenohalictis californiensis*)

Operational Procedures Manuals

Management Manuals
