

Overview

This project developed robust whole genome sequencing procedures for the early detection and characterisation of lumpy skin disease and African horse sickness viruses. The goal is to reduce the consequences of their outbreaks in Australia.

The genomic sequencing probes and procedures are now available at the Australian Centre for Disease Prevention. These serve as an invaluable resource in the event of a disease outbreak in Australia.

Project Lead: Australian Centre for Disease Preparedness; Department of Agriculture, Fisheries and Forestry

Project Contact: animalhealthlaboratories@aff.gov.au

Project Status: Complete

Objective alignment:

- 2 – Improve Australia’s surveillance and diagnostic capacity for animal pests and diseases.

Activity alignment:

- 2.1 – Implement actions under National Animal Health Surveillance Business Plan and National Animal Health Diagnostic Business Plan.
- 2.2 – Develop and implement novel technologies, such as point-of-care animal testing and genomics, to address gaps in diagnostic capacity.
