

Overview

The pilot project in New South Wales was led by consultant Redefining Agriculture in collaboration with NSW Local Land Services and smallholders.

The project trialled and evaluated a data-driven approach to assess the biosecurity risk levels and engagement needs for smallholders. This was achieved through a combination of social research and geospatial mapping.

The project focused on smallholder livestock biosecurity, particularly pig ownership in the Hunter Valley, Murray, and Riverina regions.

Key outcomes:

- Development of resources, such as maps and reports, to support stakeholder understanding and engagement with smallholders.
- A comprehensive project report detailing the effectiveness of the methods used and proposing innovative engagement strategies.
- Establishment of a community of practice to support swine and general livestock health.
- Improved epidemiological modelling for African swine fever and other emergency animal diseases using the collected data.

Project Lead: Department of Agriculture, Fisheries and Forestry

Project Contact: adpr@aff.gov.au

Project Status: Complete

Objective alignment:

- 3 – Improve the adoption and implementation of biosecurity practices throughout the terrestrial animal industry supply chain.

Activity alignment:

- 3.3 – Conduct more industry-government education and awareness communication activities to promote a biosecurity ‘culture’ and ‘community of practice’ across animal industries, including smallholders.

Project updates

February 2025

Completed.
