

Overview

The New South Wales (NSW) Department of Primary Industries and Regional Development (DPIRD) collaborated with researchers from Charles Sturt University to complete a social research project that identified key drivers and barriers to participation in syndromic surveillance.

The recommendations from this project will help NSW DPIRD decide whether to develop a syndromic surveillance platform. This would aim to allow for earlier detection of new and emergency diseases.

A report with the results of the project and recommendations for developing a syndromic surveillance system was completed in June 2024.

Project Lead: NSW DPIRD

Project Contact: animalplan@aff.gov.au

Project Status: Complete

Objective alignment:

- 1 – Improve Australia's preparedness and ability to respond to emergency animal diseases.
- 2 – Improve Australia's surveillance and diagnostic capacity for animal pests and diseases
- 3 – Improve the adoption and implementation of biosecurity practices throughout the terrestrial animal industry supply chain.

Activity alignment:

- 1.5 – Implement innovative technologies and training to meet national emergency animal disease education and training needs.
- 2.1 – Implement actions under National Animal Health Surveillance Business Plan (NAHSBP) and National Animal Health Diagnostic Business Plan (NAHDBP).
- 3.2 – Share knowledge across animal industries and jurisdictions to strengthen quality assurance programs, on-farm biosecurity systems, biosecurity extension programs and regulatory activities.
