

Overview

This project aims to develop a bead-based multiplexed serological assay for the differential diagnosis of various flaviviruses. It is suitable for use with samples from pigs and horses.

The usefulness of this assay will be compared to existing enzyme linked immunosorbent assays and the gold standard test, the plaque reduction neutralisation test.

Successful uptake of this new serological approach will enable higher throughput and more sensitive and specific testing for flaviviruses in relevant livestock species.

Project Lead: Australian Centre for Disease Preparedness; Department of Agriculture, Fisheries and Forestry

Project Contact: Animalhealthlaboratories@aff.gov.au

Project Status: Complete

Project date: April 2024 – October 2025

Objective alignment:

- 2 – Improve Australia's surveillance and diagnostic capacity for animal pests and diseases.

Activity alignment:

- 2.1 – Implement actions under National Animal Health Surveillance Business Plan (NAHSBP) and National Animal Health Diagnostic Business Plan (NAHDBP).
