

Plants on vessels, either on deck or within cabins, are a biosecurity concern as they can carry exotic diseases such as karnal bunt, guava rust and plum pox, and also harbour exotic insects.

Examples of insects on vessels that are a biosecurity concern are [Asian gypsy moths](#), [Asian tiger mosquitoes](#), [termites](#), [Old-world screw worm fly](#), and [burnt pine longicorn beetle](#).

Further information on marine pests is available at the [marine pest website](#).
