

The Department of Agriculture, Fisheries and Forestry issues export documentation required by the [Export Control Act](#) and the authorities of importing countries. Export documentation verifies that the commodity meets legislated export requirements and the requirements of the importing country. The [Manual of importing country requirements \(Micor\)](#) provides a guide to the requirements of importing countries.

Electronic documentation

[Export Documentation System \(EXDOC\)](#) is the department's software application for primary produce export documentation.

Registration as an EXDOC electronic data interface (EDI) user is open to exporters of meat, fish, dairy, eggs, grain, horticulture, skins and hides, wool and meat by-products, such as pharmaceuticals, blood and pet food.

Registered EDI users can use electronic certification and may generate their own health certificates and related documents.

Export declaration numbers

When exporters also register for the [Single Electronic Window \(SEW\)](#), EXDOC can generate an export declaration number (EDN) necessary for [Integrated Cargo System clearance](#), to streamline the export process.

Certificates for live animals

Exporters of live animals use paper certificates, generated by the department's regional officers.

Certificates for cosmetics

The department issues [Authentication of Good Manufacturing Practice certificates](#) for exporters of cosmetics to China. These are generated by the department's central offices.

Certification of wood packaging materials for export

The [Australian Wood Packaging Certification Scheme \(AWPCS\)](#) ensures that Australian treatment providers and wood packaging manufacturers produce wood packaging material that meets the ISPM 15 standard for exports.
