

Non-prescribed goods are not regulated by Australian export laws. Exporters must meet the requirements of the importing country.

New exporters — [read our step-by-step guide to exporting non-prescribed goods](#).

Types of goods

You need to understand how your product is defined by law, as export requirements differ.

Prescribed goods

Prescribed goods are regulated by us.

Check if you are exporting a prescribed good:

[Organic or biodynamic goods](#) are always prescribed. To export goods as organic or biodynamic, you must also meet specific requirements for export.

Non-prescribed goods

Examples of non-prescribed goods include:

- animal by-products
- [cosmetics](#)
- blood and blood products
- dried pet food
- nutritional supplements
- processed foods
- rendered fats and oils
- rendered meats
- skins and hides
- wool.

Confirming that your goods are non-prescribed can be complex. Read our advice about [determining a non-prescribed good](#).

Importing country requirements

You must meet all requirements set by your importing country.

Before you export:

- check [our Manual of Importing Country Requirements \(Micor\)](#) — some non-prescribed goods are in the Meat, Fish and Dairy sections
- talk to your importer and importing country authority.

Export quotas

Some of our trade agreements include reduced tariff rates for certain products. We manage these through export quotas.

You may be eligible if you export to Japan.

Export listed establishments

Some importing countries require producers of non-prescribed goods to be export listed. Goods include:

- bee products
- blood and blood products
- edible fats and oils
- health foods
- leather products
- pet food products
- rendered animal products
- skin or hide products.

Your importing country may also require proof that you have only used export listed establishments at each point in the supply chain.

[Check Micor](#) for your requirements.

You can apply to be export listed, if you produce your own non-prescribed goods for export. To apply to be export listed you may be required to:

- have a [documented system](#) to manage public and animal health during production
- be assessed by one of our officers or a third party auditor
- be audited on site, in some cases.

Documents and certificates

Your importing country may require government-issued export documents and/or certificates.

Letter of free sale

Your importing country may require registration of goods prior to export.

You can use a [letter of free sale](#) to prove your goods are available for sale in Australia.

Authentication of Good Manufacturing Practice (GMP)

Some importing countries, including China, require authentication (or confirmation) that Australian goods have been manufactured in accordance with Good Manufacturing Practice (GMP) standards.

The department issues [Authentication of Good Manufacturing Practice certificates to exporters of cosmetics](#), after verifying appropriate documentation.

You may [request an Authentication of Good Manufacturing Practice certificate from the department](#) if you can provide a certificate from the Therapeutic Goods Administration (showing the manufacturer is licensed to produce the goods at the Australian manufacturing site) or an accredited third party certifying that the manufacturing premises complies with ISO 22716:2007 Good Manufacturing Practice—Cosmetics.

Transfer certificates

Some importing countries require traceability of goods at each point in the supply chain.

You can use a [transfer certificate](#) to prove your goods were only sent between export listed establishments. This does not apply if you are sending products straight to a wharf or airport.

Government certificates

If your importing country requires export documents and/or certificates, we can issue them.

To request export documents:

- use our [Export Documentation System \(EXDOC\)](#), for certain inedible meats, wool, feathers, trophies, skins and hides
- use our [Next Export Documentation System \(NEXDOC\)](#) for certain honey markets
- submit a [manual application form](#).

You may be required to provide (in English):

- clear evidence that your goods meet all import conditions and official requirements
- any specific declarations or endorsements that must be included on the certificate (such as manufacturers' declarations, laboratory reports and treatment records).
