

We ensure that all goods, conveyances and travellers meet Australia's biosecurity import conditions and that food imported into Australia and intended for sale meets food safety requirements.

We are responsible for operational policy and front-line regulation to manage biosecurity and imported food risk, and the delivery of assessment, inspection, stakeholder engagement and client contact services.

Our front-line staff inspect and assess thousands of consignments annually to prevent biosecurity threats entering our country and to protect human health. These threats pose significant risks to our environment, agriculture industries and way of life.

Working with all stakeholders in the importing and shipping industries enables us to deliver these activities.

Our client service standards

As part of our commitment to continuous improvement in service delivery, we have established [client service standards](#) that outline the level of service you can expect from us.

Our performance report for client contact services, import services and export services provides a quarterly update of how we are performing against these standards.

Operational updates

Sharing information with our stakeholders helps us achieve our goals.

See our recent significant biosecurity operational updates. You can also check all [import industry advice notices](#).

Check our [imported food notices](#) for updates on imported food safety requirements. [Subscribe to be notified of new releases](#).

Pre-border biosecurity treatment providers and import and shipping industries stakeholders associated with importing goods fumigated with ethyl formate are advised that ethyl formate (EF) in combination with carbon dioxide (CO₂) is a new biosecurity treatment for Brown Marmorated Stink Bug (BMSB) from 1 September 2025 and the Ethyl formate fumigation methodology (version 1.0) has been published on the [Methodologies and documents for biosecurity treatments webpage](#).

Biosecurity industry participants that manage oversize tyre inspections at first points of entry and class 1.1 approved arrangement premises are advised that the oversized tyres presentation and treatment guide has been published on the department's website.

The guide can be found on the '[Importing Tyres](#)' webpage.

Food importers and Customs brokers are advised that BICON cases documenting the food safety requirements that apply to food imported into Australia that is intended for sale, were released on 15 June 2025.

Import-related biosecurity treatment stakeholders, including importers, Customs brokers, onshore approved arrangement holders, and overseas government and industry treatment providers are advised of the updated methyl bromide treatment methodology coming onto force on 1 May 2025.

Customs brokers and importers responsible for the importation of military goods, including machinery, vehicles, aircraft, vessels military working dogs, meals-ready-to-eat, packs and webbing, and personal equipment are advised of the new BICON case Goods for military use intended to assist in understanding import requirements as they relate to military goods.
