

Check our [Biosecurity Import Conditions system \(BICON\)](#) for biosecurity import conditions and imported [food safety requirements](#).

All biosecurity import conditions must be met before imported food safety requirements apply.

We classify imported food that presents a potential medium or high risk to public health as [risk food](#). All risk food is listed in the [Imported Food Control Order 2019](#).

Enoki mushrooms that are fresh are classified as risk food

This includes:

- enoki (enokitake) mushrooms, also known as golden mushrooms or golden needle mushrooms
- fresh packaged enoki mushrooms (including vacuum packed).

Exclusions

- food from [New Zealand](#)
- canned, dried or frozen enoki mushrooms
- enoki mushrooms that are mixed with other mushrooms, or other foods.

Community Protection (CP) question

You will need to answer this CP question when lodging your [full import declaration](#):

IFIS: Are the goods mushrooms of the Flammulina genus (also known as enoki / enokitake) that are fresh packaged (including vacuum packed)?

Inspection and testing

We refer consignments of enoki mushrooms that are fresh for analytical testing.

During inspection, we will also conduct a visual and label assessment. Consignments will be checked to ensure appropriate directions for use are on the label, including statements to the effect that the mushrooms:

- must be cooked before consumption
- must be refrigerated.

Details on analytical testing for enoki mushrooms can be found in the food safety requirements case in [BICON](#) for 'Mushrooms, mushroom products and truffles'.

Testing applies at a rate based on the compliance history of the particular food.

Food safety risks

Food Standards Australia New Zealand (FSANZ) has published [advice](#) about the risk of enoki (enokitake) mushrooms. These products present a potential medium or high risk to public health and safety for *Listeria monocytogenes*.
