

Improving access to imported food safety requirements

Imported food safety requirements are now included in the [Biosecurity Import Conditions system \(BICON\)](#).

See more about the [Inclusion of food safety requirements in BICON](#).

All imported food intended for sale in Australia must be safe and meet Australia's food standards. We regulate food that is imported for sale to check it is safe and compliant with these standards.

All food imports must meet [biosecurity import conditions first](#).

Get started

What to prepare

On arrival

We inspect and test imported food intended for sale to check it is safe and compliant under the Imported Food Inspection Scheme. The frequency of inspection and testing depends on the food safety risk of the food imported.

Laboratories test imported food to verify safety and compliance with Australia's food standards. To become an appointed analyst, laboratories must apply and meet our conditions of appointment.

Stay informed

Check our [imported food notices](#) for updates on imported food requirements.

Our role

We administer laws and regulations relating to importing food.

The [Imported Food Control Act 1992](#) provides for us to operate the Imported Food Inspection Scheme.

Find out more about the [legislation we administer](#).

Food regulation system

We monitor imported food intended for sale at the border for safety and compliance with Australia's food standards as part of the wider food regulation system.

Find out more about [Australia's food regulation system](#).

Imported Food Consultative Committee

We work with food and beverage import industry representatives, analysts and government agencies to consider practical and strategic issues that impact food imports.
