

Improving access to imported food safety requirements

From mid-2025 imported food safety requirements will be incorporated into the [Biosecurity Import Conditions system \(BICON\)](#).

See more about the [Inclusion of food safety requirements in BICON](#).

All biosecurity requirements must be met before [Imported Food Inspection Scheme](#) requirements apply.

Check our [Biosecurity Import Conditions system \(BICON\)](#) for biosecurity import conditions.

Food type

Infant formula includes powdered infant formula and powdered follow-on formula.

Exclusions

Food from [New Zealand](#).

Inspection and testing

This food is classified as a [surveillance food](#).

We refer consignments for analytical testing at the rate of 5%. During inspection we will also conduct a visual and label assessment.

Table 1 shows the tests that will be applied and permitted results for each food type.

Table 1, Food type, test applied and permitted result

Food type	Test applied	Permitted result
Powdered follow-on formula – for infants 6 months and over	Salmonella	n=10, c=0, m=not detected in 25 g
Powdered infant formula – for infants 6 months and under	Salmonella	n=10, c=0, m=not detected in 25 g
	Cronobacter	n=10, c=0, m=not detected in 10 g

n = the number of samples to be analysed from a lot of food.

c = the maximum number of sample units that can be greater than ‘m’.

m = the acceptable microbiological level in a sample unit.
