

What you need to know

Semen and embryos from the animal species listed below can currently be imported into Australia from selected Department of Agriculture, Fisheries and Forestry approved countries only.

Permitted species for imports of animal semen include buffalo, cattle, cats, deer, dogs, giraffes, goats, horses, mice, rats and sheep.

Permitted species for imports of animal embryos include buffalo, cattle, deer, goats, mice, rats and sheep. For information about importing semen from dogs, please review the information available for:

For information about importing semen or embryos from livestock and horses, please review the information available on [Importing livestock and equine reproductive material](#).

For further information about the any of the permitted species, please refer to the department's [Biosecurity Import Conditions system](#) (BICON). BICON provides the import conditions for all permitted semen/embryos from approved countries.

Note: Some semen/embryos are not permitted into Australia and therefore will not be listed.

Additional information

Import risk analyses
