

Opinions included in the material appearing on this website do not necessarily represent those of the Wildlife Exotic Disease Preparedness Program, the Department or the Australian Government.

The WEDPP is a joint program involving the Australian Government and state and territory governments that commenced in 1984-85.

WEDPP's mission is to improve Australia's emergency animal disease preparedness through the development of strategies to monitor, prevent, control or eradicate emergency diseases in wildlife and feral animals that threaten Australia's livestock industries.

In recent years more emphasis has been placed on improving wildlife surveillance, and for Australia to gain a better knowledge of potential pathogens in the general environment.

The specific objectives of WEDPP are:

- To enhance and refine technologies for the surveillance, containment and control of wildlife in order to improve Australia's animal disease preparedness capability.
- To develop a national cadre of competent personnel to perform wildlife disease control roles in an emergency animal disease incident; and promote the integration of animal health and wildlife personnel and activities for better animal health outcomes.
- To assist with the development of Australia's animal disease preparedness with an emphasis on developing wildlife strategies and procedures for AUSVETPLAN.

The program has been instrumental in generating awareness of the potential role of wildlife and feral animals in the spread of exotic diseases. The program has also facilitated the development of control and eradication payments.

Information about current and completed projects are provided below.

2012-13

WEDPP project

2012-2013

Project Number	Project
1	Core Funding for the Australian Wildlife Health Network – New South Wales
2	Preparing for rabies: incursion pathways among free–ranging and domestic dogs – New South Wales

3	A biogeographic and ecological approach to wildlife health surveillance in Sahul – New South Wales
4	Social analysis of the Australian Wildlife Health Network Digest readership between populations – New South Wales

2011-12

WEDPP projects 2011-12

Project Number	Project
1	Core Funding for the Australian Wildlife Health Network – New South Wales
2	Mapping Hendra Virus (HeV) distribution and diversity – Queensland PDF [278 KB, 1 page] Mapping Hendra Virus (HeV) distribution and diversity – Queensland DOCX [63 KB, 1 page]
3	Avian migration and movement of pathogens in the Australo-Papuan context: Developing novel methods for the accurate assessment of relevant connectivity between populations – New South Wales DOCX [34 KB, 3 pages]
4	Evaluation of a real time Polymerase Chain Reaction (PCR) to simultaneously detect and differentiate virulent and non-virulent Newcastle Disease Virus (NDV) – Victoria DOCX [63 KB, 17 pages] Evaluation of a real time Polymerase Chain Reaction (PCR) to simultaneously detect and differentiate virulent and non-virulent Newcastle Disease Virus (NDV) – Victoria PDF [278 KB, 17 pages]

2010-11

WEDPP projects 2010-11

Project Number	Project
1	Taronga Conservation Society Australia - Australian Wildlife Health Network Core
2	Identifying and Mapping Hendra virus

Final report On Newcastle Disease Viruses in Wild Bird Species and Poultry
PDF [198 KB, 19 pages]

3 Final report On Newcastle Disease Viruses in Wild Bird Species and Poultry
DOCX [219 KB, 19 pages]

Development and Validation - Newcastle Disease

4 WEDPP final report May 2011

Avian Migration and Movement pathogens in the Australo-Papuan context

5 Reservoirs of Infection: The Epidemiological Characteristics of an Emerging
Pathogen

2009-10

WEDPP projects

Project Number

Project

1 Taronga Conservation Society Australia - Australian Wildlife Health
Network Core

2 Identifying and Mapping Hendra virus

3 Development and Validation - Newcastle Disease DOCX [709 KB, 35 pages]

4 Field Surveillance and Monitoring – Leishmania in the Northern Territory

5 Avian Influenza Viruses in Migratory Shorebirds and Nomadic Water Fowl
in South Australia

2008-09

WEDPP projects

2008-09

Project Number

Project

1 Northern Connections – Movements Of Birds Between Australia and Near
Northern Neighbours

2 The Zoological Parks Board Of NSW - Australian Wildlife Health Network

3 Maintenance of a Coronavirus in a Population of Australian Bats

4 Feral Animals as Hosts of Exotic Disease

5 Destroy and Let Lie Disposal Project

6	Improving the Relevance and Efficiency of Wild Bird Surveillance for Avian Influenza
7	Identifying and Mapping Hendra Virus Strain Diversity

2007-08

WEDPP projects

2007-08

Project Number Project

1	Northern Connections – Movements Of Birds Between Australia And Near Northern Neighbours (No final report available)
2	The Zoological Parks Board Of NSW - Australian Wildlife Health Network
3	Improved Characterisation Of Avian Influenza Subtypes By PCR DOCX [543 KB, 10 pages]
4	Disease Surveillance And Epidemiological Investigations In Australian Fur Seals DOCX [62 KB, 5 pages]
6	Field Study On The Prevalence Of Different Rabbit Caliciviruses In South Eastern Australia (No final report provided)
8	Training Course In Exotic Animal Disease Preparedness For Free-Ranging Wildlife And Feral Animal Personnel (No final report provided)
9	Review Of Wildlife Exotic Disease Preparedness In Australia – Workshop Proceedings, April 2008 DOCX [983 KB, 45 pages]
	Research on Wildlife Disease Preparedness in Australia - Wendy R Henderson (2008) DOCX [508 KB, 91 pages]

2006-07
