

This section contains information on the [history of locust plagues in Australia](#) and the biology and ecology of the three main pest species of locusts.

The [About locusts](#) pages give some background information on what locusts are, unique features of their lifecycle and the identification of different development stages.

The [Locust and grasshopper identification guide](#) has pictures of adults and nymphs of locust and a number of common grasshopper species. It gives descriptions and comparisons to help with species identification.
