

The Indigenous Ranger Biosecurity Program (IRBP) helps protect Australia's more than \$81 billion agriculture industries by contributing to the delivery of enhanced biosecurity capability in northern Australia, engaging Indigenous rangers through fee for service arrangements to undertake biosecurity activities including:

- high-risk aquatic infrastructure monitoring
- plant host mapping
- community animal health reporting
- exotic pest, disease and weed surveillance
- trapping for insects that carry animal diseases and
- raising community awareness.

The IRBP works with stakeholders to build biosecurity capability and provide economic opportunities for Aboriginal and Torres Strait Islander communities across northern Australia through:

- training including career pathways into biosecurity and
- funding and grant opportunities.

Evaluation report

The most recent evaluation finalised in 2022 supports the continuation of the IRBP and makes recommendations to strengthen the program.

Related

Ongoing funding for the IRBP was announced in the 2023-24 budget:
