

Australia's natural assets including clean air, soil and water underpin our agricultural productivity. They also support the way of life we enjoy, including our love for the outdoors , healthy food production and a prosperous economy.

Environmental biosecurity protects these natural assets from damaging pests, weeds and diseases. This means that a [strong environmental biosecurity system](#) helps protect our way of life.

The [Australian Chief Environmental Biosecurity Officer](#) oversees Environmental Biosecurity in Australia, protecting Australia from both [exotic](#) and [established](#) pests, weeds and diseases.
