

The National Framework for the Management of Established Pests and Diseases of National Significance (the framework) is a key deliverable of the Intergovernmental Agreement on Biosecurity (IGAB). Building on the strengths of the current system, this framework provides a strategic, consistent, scientific and risk-based approach to managing the impacts of Established Pests and Diseases of National Significance (EPDNS). The framework allows for:

- activities to be undertaken by the most appropriate party
- appropriate prioritisation of EPDNS based on risk
- effort to be targeted where the greatest biosecurity outcomes can be achieved in the national interest
- investment return to be optimised
- adoption of national investment principles involving beneficiaries and risk creators
- minimisation of regulatory burdens associated with containment of established pests and diseases.

The framework was endorsed by the NBC in July 2016 following public consultation through the discussion paper [Modernising Australia's approach to managing established pests and diseases of national significance](#). Individual submissions and summary of the feedback are available for download.
