

We have completed the Import risk review for cooked duck meat from Thailand.

Steps to complete this risk analysis

When we do a risk analysis, we:

- start the risk analysis by reviewing the science on pests and diseases of concern
- assess and analyse biosecurity risks
- develop proposed risk management measures
- consult the public on the draft report and then review comments
- publish a final report
- develop import conditions
- publish import conditions in our Biosecurity Import Conditions System ([BICON](#))

[Register in BICON](#) to receive an alert when we publish the import conditions.

Learn more about why we carry out [risk analyses](#) and our [international obligations](#).

About the final report

We undertook this review of biosecurity requirements in response to a request from Thailand for market access to Australia for cooked duck meat. It was developed as an extension of the [Generic import risk analysis report for chicken meat \(2008\)](#).

All imports must meet the agreed biosecurity import conditions.

The final report details:

- disease agents of biosecurity concern
- risk assessments for the identified disease agents
- recommended risk management measures.
