

Steps to complete this risk analysis

When we do a risk analysis, we:

- start the risk analysis by reviewing the science on pests and diseases of concern
- assess and analyse biosecurity risks
- develop proposed risk management measures, if required
- consult the public on the draft report and then review comments
- publish a final report
- develop import conditions
- publish import conditions in our Biosecurity Import Conditions System (BICON)

This analysis was completed in 2021. Importers will soon be able to apply for a permit via BICON. [Register in BICON](#) to receive an alert when we publish the import conditions.

Your feedback

Thank you for sharing your perspectives, ideas and research on the draft report.

We received submissions from several interested stakeholders in Australia. All stakeholder submissions were considered and a number of changes were made to the risk review report. A summary of the key issues identified and the department's response to those issues is available below as well as a summary of revisions made to the import conditions following stakeholder feedback:

Note that if new scientific information becomes available, it can be provided to the department for consideration after a risk analysis has been completed. The department will consider information provided and, if appropriate, review import requirements based on the new scientific information.

About the final report

We recommend that the importation of zoo bovids be allowed from approved countries. All imports must meet the agreed biosecurity import conditions.

The final report details:

- diseases of biosecurity concern for this commodity
- risk assessments for the identified diseases of biosecurity concern

We identified twenty-six diseases in the hazard analysis for assessment. The report makes recommendations on risk management measures for 22 diseases where the risk is not managed by general zoo import conditions.
