

The Department of Agriculture, Fisheries and Forestry is responsible for protecting Australia's environment and agricultural industries from the introduction of pests and diseases from other countries.

Interstate quarantine is a serious issue. Pests, diseases and weeds can spread from one part of Australia to another through the movement of:

- plants or plant products
- fruit and vegetables
- animals or animal products
- soil
- agricultural machinery and other equipment
- recreational equipment.

Travellers face on-the-spot fines for taking prohibited items across borders.

The [Australian Interstate Quarantine website](#), published jointly by Australian state authorities, gives you all the quarantine information you need for travelling within Australia.
