## Report signs of bird flu

If you notice sick or dead birds or other animals showing signs of bird flu, you should not touch them or get too close. Record your location and report multiple sick or dead birds or other animals to the 24-hour Emergency Animal Disease Hotline on 1800 675 888.

## Event data

As of 4pm AEST, 26 August 2026, Australia has 341 positive events of H5 bird flu in wildlife.

- 10 in Western Australia (WA)
- 195 in South Australia (SA)
- 14 in New South Wales (NSW)
- 2 in Queensland (QLD)
- 108 in Victoria (VIC)
- 12 in Tasmania (TAS)

As H5 bird flu is confirmed in more locations and species in Australia it will not be necessary to continue testing all species in known areas of transmission, or to test every animal involved in an investigation. Reporting will be targeted to provide a clear picture of the national H5 bird flu situation in wildlife in Australia and key developments.

### Data disclaimer

Data reflects information provided by state and territory governments to the Australian Government as at 17:00 AEST daily. The Australian Government publishes this information for national reporting purposes. Responsibility for the accuracy, completeness and currency of the data remains with the relevant state or territory government. Due to differences in reporting timing, information on the national dashboard may differ from information published on state or territory government websites.

# **Approach to reporting**

From 12 August 2026, we have changed how we report on H5 bird flu detections.

Reporting is now based on events, rather than individual detections.

An event may involve one or more animals. The new number of positive events captures all previously reported individual confirmed detections.

## **Definitions**

**Investigation:** An event where one or more wild birds or wild mammals showing signs of H5 bird flu have been reported to state or territory authorities and samples have been collected for laboratory testing.

**Positive event:** An investigation where H5 bird flu has been confirmed through laboratory testing.

**Hotline report:** A report to relevant state or territory authorities through the Emergency Animal Disease Hotline or other official sources.
