

Activity: Respond to the following questions

Think about how what is covered in this topic might apply to your land management or farming practice.

Consider the following questions and make notes about carbon farming activities that might suit your enterprise.

The following points will help you have informed discussions with advisers.

Please note that the next topic explores the risks and requirements of various carbon farming activities, which should be considered before starting a project.

- Why are you interested in carbon farming?
- What are your main emission contributions? (Are they scope 1, 2 and/or 3?)
- Go to [My Climate View](#) and note any projected changes based on your location and commodity. (Note: these are projections only, not necessarily the reality of your situation)
- Learn about carbon targets in your supply chain.
- Based on the information provided in this topic, what else is important for you to note for future reference?
