

The National Biosecurity Management Group (NBMG) met on 15 September 2025 due to additional detections of *Lepisiota incisa* and approved a 3-year Response Plan for the National *L. incisa* Eradication Program (NLIEP). Based on the advice of the National Biosecurity Management Consultative Committee, the NBMG has maintained *L. incisa* remains technically feasible to eradicate and agreed to commit an additional \$1.2 million to deliver response objectives.

Led by the Western Australian Department of Primary Industries and Regional Development (DPIRD), the nationally cost-shared Response Plan aims to eradicate *L. incisa* by June 2028. The plan includes a range of activities to delimit, contain and eliminate any remaining infestations in Western Australia.

L. Incisa is an exotic ant species that forms super-colonies that can impact the environment through reducing biodiversity and out-competing native ant species. While it may be present in urban environments, it is not known to sting or be harmful to human health.

If you suspect the presence of *L. incisa* in Perth or the surrounding area please report your suspicions to DPIRD through the [MyPestGuide Reporter app](#) or call the Exotic Plant Pest Hotline on 1800 084 881. You can find out more about how we respond to pest and disease incidents at [outbreak.gov.au](https://www.outbreak.gov.au).
