

The National Management Group (NMG) met on 14 May 2024 and approved the revised budget for the red witchweed (*Striga asiatica*) Response Plan 2022 – 2025 (originally endorsed on 13 December 2023).

The NMG agreed red witchweed remains technically feasible and cost-beneficial to eradicate from Australia and Response Plan 2022 – 2025 remains fit-for-purpose.

The total cost share budget for Response Plan 2022 – 2025 is \$3.8 million.

The National Red Witchweed Eradication Response Program is a deed-like response cost shared between affected government and industry parties since 2015.

Red witchweed was first detected in July 2013 in Mackay, Queensland. On 4 June 2015, the NMG endorsed a 10-year eradication program to 2025. For further information on red witchweed, please visit the [Outbreak website](#).

If you think you have seen red witchweed, report it to Biosecurity Queensland on 13 25 23.
